MVP Product Implementation Guide

Internal master product, UX and implementation blueprint • 26 August 2026

Connected Patient • Doctor • Community • Hospital/Clinic • Admin • AI • Backend • Demo Automation

Locked MVP Boundary

Included: Patient PWA, Doctor PWA, shared Blood and Things Sharing, three facility dashboard variants on one SaaS codebase, Admin dashboard, four shared AI contracts, sync backend, and one frontend with STATIC / DEMO / API services. **Excluded:** old 280-screen enterprise Hospital scope, pharmacy, lab operations, CRM, IPD/beds, camps/social feed, subscriptions and advanced finance.

Roles and Permissions

Actor	Can	Cannot
Patient	Book, track token, share selected files, community	Browse provider/admin data
Doctor	Consult, note, prescribe, apply to eligible jobs	Browse unapproved patient drive; self-verify
Student provider	Role-filtered supervised opportunities (architecture only)	Independent consult/prescribe in MVP
Facility	Bookings, patients, consent-gated files, hiring	Create own account; alter PMDC
Admin	Verify doctors, create facility accounts, moderate	Provide clinical diagnosis
AI	Triage guidance, note draft, authorized-file summary, admin assist	Make final medical/admin decisions

Shared Data and Service Modes

Layer	MVP responsibility
Frontend/local	Medicine reminder, filters, simple settings, basic SOS presentation
Backend	Auth, users, verification, facilities, appointments, tokens, record shares, prescriptions, jobs/applications, Blood, Things, moderation, notifications
AI API	Triage; consultation note draft; authorized record summary; admin verification/moderation assist
STATIC	Local deterministic seed data
DEMO	Seeded automatic responses and controlled transitions
API	Real backend implementation through same service interface

Canonical Screen Counts

Product	Canonical screens	Rule
Patient	24	Five-item bottom nav
Doctor	19	Doctor UI now; student role supported in filtering
Shared Community	12 shared components/states	Not duplicated between PWAs
Hospital/Clinic	14	Three dashboard variants, one codebase
Admin	9	PC-first responsive
Total	78 canonical screens	Major states documented inline; micro-states are components

A-09	Platform Settings	Settings	Sidebar / dashboard card	Settings	Open row; primary action	Save Settings	Parent/Sidebar	FE+BE	New	DashboardShell	No

Key End-to-End Product Flows

Flow	System behavior
Appointment & token	Patient books → backend reserves slot → doctor and facility receive booking → reception checks in → token advances → patient queue updates.
Consent-gated records	Doctor requests named files and purpose → patient approves all/partial/denies → optional PIN → time/file-limited access → revoke/expire closes access.
Hiring	H-10 Jobs → H-11 Create/Publish → D-12 Board → D-13 Detail → D-14 Apply → H-12 Applicants → H-13 Candidate decision → D-15 status. Backend filters provider_role, verification and specialty where required.
Demo automation	DEMO adapter schedules deterministic response: booking progression, applicants, donor response and item owner decision; no account switching required.

MVP Business Rules and Edge Cases

Area	Rule / recovery
Triage	Guidance only; critical result shows emergency escalation and never claims diagnosis.
Consultation note	AI draft must be reviewed and approved by doctor before storage.
Record summary	Only authorized file IDs; include citations; deny/revoked/expired returns no content.
Verification	AI/OCR assists; Admin is final decider; unverified doctor cannot accept clinical work.
Hiring	Student role remains supervised and role-filtered; Doctor specialty match enforced where required.
Community	Blood states OPEN/RESPONDED/FULFILLED/CLOSED; Things AVAILABLE/REQUESTED/BORROWED/RETURNED/CLOSED.
Failures	Network retry preserves idempotency key; payment/refund only where booking integration requires it; demo uses deterministic outcome.

Implementation Dependencies

Order	Dependency
1	Shared auth, role claims, service interface and seed IDs
2	Admin verification and facility account creation
3	Patient/doctor booking + hospital reception/token sync
4	Consent-gated record share + prescription
5	Hiring cross-product flow
6	Community shared modules + moderation
7	AI contracts and Demo orchestration
8	Route, permission and responsive regression audit
